Test / Parameter	Result	Flag	Units	Ref.Range
COVID-19 (SARS-CoV-2) PCR	Negative			Negative

Sample Type :   Nasopharyngeal Swab

Method:
Detection od SARS-CoV2 Viral RNA performed on Real Time Polymerase Chain Reaction(RT-PCR)

Procedure:
RNA was extracted using Viral Nucleic Acid Extraction system.
Extracted RNA was amplified using Real Time Fluorescent RT-PCR kit for the detection of SARS-CoV2 VIRUS.

Interpretation:
This assay detects SARS-CoV2 virus qualitatively.
Both positive and negative controls for the tested virus showed expected result.
Not detected results may not always rule out current or future infection.Please correlate with cilinical findings and repeat if necessary.Lower repiratory sample is recommended in severe and progressive disease.
Positive result indicates the RNA from SARS-CoV2 was detected and patient is infected.
Negative result indicates SARS-CoV2-virus not present in specimen above the limit of detection.
